# Superior *integration*\*

With the new Mirafi® RSi-Series, it's like comparing apples to oranges for Roadway Reinforcement.

## Orange wins.

You asked for the impossible...and we responded.

Our new game-changing products, Mirafi® RSi-Series geosynthetics will revolutionize the way you look at geosynthetics for roadway stabilization.

As the leader in geosynthetic solutions, TenCate

MiraSpec Design Solutions Software provides cost savings and "green" savings by incorporating a geosynthetic.

MiraSpec Design Solutions Software is easy to use and is available at no cost at [www.Mirafi.com](http://www.Mirafi.com)

Geosynthetics began the extensive research and design process of looking for the "perfect" geotextile that could move more water while concurrently retaining more soil within a roadway system. This product would also need to hold more force with less overall system movement in order to improve the base strength and support heavier loads; thus, resulting in longer life, less maintenance and costs, and better performance.

The solution we developed... Mirafi® RSi.

We have proven that a geotextile can solve a complex roadway problem, where once upon a time, the only solution

### Geosynthetic Waterflow

considered by some was a geogrid product. Mirafi® RSi is all about *integration*...

...Integration of a superior multi-layered construction of woven fibers of various dimensions specifically positioned relative to adjoining fibers to create three times the water flow AND an increase in AOS sieve size.

Because Mirafi® RSi-Series geosynthetics have higher tensile modulus properties than comparable stabilization products on the market today, it is perfect for base course reinforcement and subgrade stabilization in roads,

### Modulus at 2% Strain

Cross-Machine Direction

railways, runways and haul roads; and for stabilization of embankments on soft foundations. It also performs well for liner support, voids bridging, hazardous pond closures and other environmental purposes. Mirafi® RSi-Series geosynthetics are available in a variety of roll sizes to fit your specific project needs and requirements.

Because no one understands geosynthetics better than TenCate Geosynthetics...our materials make a difference.

\*Integration refers to the overall set of described characteristics based on a review of technical specifications for comparable products published by their respective manufacturers. Individual characteristics of these products vary and may meet, exceed, and fall below one or more of the above described individual characteristics.
